Malmo is a Flowform feature with impressive water movement given its very wide design. The rocking lemniscate figure eight flow is rapidly sent through the geometric spouts at either end of the fountain pieces. Utilized as a cascading series of three fountains, the Malmo is ideal for large to medium ponds, aquatic gardens and waste water treatment systems. They can be stacked against a hillside or propped up on steps for water to flow from top to bottom.

**Standard Colors**

- Bone
- Marsh Green
- Coco
- Portland Grey
- Latte

**Dimensions**

- Diameter: 39”
- Height: 12 1/2”
- Weight: 221 lbs.
